HISTORY OF

Matcha

- **960-1279 AD:** The method of grinding tea leaves into a powder starts in China, laying the foundation for what would become matcha.
- **12th Century:** This powdered tea technique is brought to Japan by a Zen monk, Eisai, and slowly transforms into matcha.

- **16th Century:** The ritual of preparing and drinking matcha becomes central to Japanese tea ceremonies, further embedding it in cultural practices.
- **Late 20th & 21st Century:** Matcha gains global popularity, known for its unique flavor, health benefits, and versatility in food and drinks.

REGIONS PRODUCING

Matcha

Cultivation

MATCHA PRODUCTION

- The matcha journey begins with the careful cultivation of *Camellia sinensis* plants
- These plants are shaded 20-30 days before harvest to boost chlorophyll and theanine, enhance flavor and texture.

Harvesting

MATCHA PRODUCTION

- The best matcha is harvested during the first flush of spring, known as the Ichibancha harvest.
- For premium quality, harvesters hand-pick the top one or two leaves along with the bud. This careful selection ensures the highest quality matcha.

UJI HARVEST CYCLE

Processing

MATCHA PRODUCTION

- The harvested leaves are quickly steamed to prevent oxidation, preserving their vibrant green color.
- They are then air-dried, with the stems and veins carefully removed.

Grinding

MATCHA PRODUCTION

- The final step involves grinding the remaining parts of the leaves, known as tencha, into a fine powder using stone mills.
- This slow process ensures that the matcha does not lose its flavor or color due to excess heat.

GRADES OF

Matcha

- **Ceremonial Grade:** The highest quality matcha. Used for traditional tea ceremonies, and can be enjoyed brewed as tea.
- **Premium/Latte Grade:** A balanced matcha often preferred for lattes. It's designed to blend well with milk or dairy substitutes, providing a delicate balance of matcha's distinct flavor.
- **Culinary Grade:** Suited for cooking and baking, this grade has a more strong flavor that can stand out when mixed with other ingredients. Usually more bitter.

EVALUATING QUALITIES OF

Matcha

- **Flavor Notes**
 - Describe the predominant flavors you detect such as grassy, earthy, or sweet. These are specific tastes that emerge from the tea, shaped by its production and origin.
- **Umami**
 - Rate the umami, or savory richness of the matcha. Umami is the fifth taste, akin to the brothy flavor found in cooked meats and rich broths, adding a depth that is highly valued in matcha.
- **Bitterness**
 - Assess the level of bitterness. Proper bitterness in matcha should be mild and adds to the complexity of the tea, enhancing its other flavors rather than overpowering them.
- **Aftertaste**
 - Consider the taste left in your mouth after swallowing. A high-quality matcha will leave a pleasant aftertaste that lingers positively, encouraging another sip.
- **Overall Satisfaction**
 - Give an overall rating based on your enjoyment and the balance of flavors in the matcha. Reflect on the harmonious interaction of flavors and whether the tea met your expectations.

Tea Ceremony

THE ART OF TEA

Chanoyu

- Deeply rooted in Zen Buddhism, reflecting mindfulness and a connection to the present moment.
- Involves carefully choreographed steps and manners for preparing and serving matcha, emphasizing aesthetics and hospitality.
- It's a philosophy and a way of life, promoting a mindful approach to everyday interactions and activities.

THE ART OF TEA

HARMONY

sei

PURITY

jaku

TRANQUILITY

- The tea ceremony encapsulates the spirit of '*Ichigo Ichie*' (one time, one meeting), emphasizing mindfulness and appreciation for the moment
- Helps promote a strong bond between the host and their guests as two equals

UTENSILS IN A

Tea Ceremony

chawan

TEA BOWL

- The **Chawan** is the vessel in which the tea is prepared and consumed.
- A bowl with spout is called *Katakuchi*, which is useful for pouring matcha to another container
- They come in various sizes, shapes, and colors, often chosen to match the season

chasen

TEA WHISK

- The **Chasen** is a whisk made from a single piece of bamboo. It is used to mix the matcha powder with hot water to produce a frothy, smooth tea.

OTHER WAYS OF
brewing

Shaker Jar

Electric Frother

Resin Matcha Whisk

kusenaoshi

WHISK STAND

- The **Kusenaoshi** is a stand to keep your matcha whisk safe when you're not using it. It helps the whisk dry properly and keeps its original shape, so it works better for longer.

chashaku

TEA SCOOP

- The **Chashaku** is used in the tea ceremony to measure and transfer matcha into the tea bowl (chawan).
- The elongated shape allows it to reach deep into the matcha container without getting hands too close to the powdered tea

chakoshi

SIFTER

- The **chakoshi**, a fine mesh sifter, is used in the tea ceremony to sift matcha powder before whisking
- Sifting the matcha removes any clumps or impurities, resulting in a smoother and more even consistency

LET'S MAKE SOME

Matcha Lattes

setup

- Place the bowl on the scale, and put the sifter on top of it
- Tare/Reset the scale to zero

STEP 1

scoop

- For lattes, we recommend **4g** of **Matcha Powder**

Tips

- *No weighing scale?* Measure **3-4 scoops** with the chashaku

STEP 2

sift

- Sifting matcha helps eliminate clumps for a smoother drink.
- Use a traditional tea strainer or fine-mesh kitchen strainer.

Tips

- No *sifter*? You can try to break up clumps by whisking the matcha powder in the bowl before adding water.

STEP 3

add water

- Add **40 g water** that is somewhere the temperature of **60 to 80°C**.

Tips

- Pour water onto the side of the matcha bowl, not directly onto the matcha powder, to prevent it from scattering.
- *No temperature-controlled kettle?*
 - Transfer boiling water to a room temp cup to reduce 10°C and repeat.
 - Let boiling water sit for about 10 minutes.

- 
- A close-up photograph of a person's hands whisking matcha in a white ceramic bowl. The person is wearing a white long-sleeved shirt. The background is dark and out of focus. The text is overlaid on the right side of the image.
- Whisk in a zigzag motion until matcha becomes frothy

Tips

- Whisk from the Wrist: Whisk using your wrist, not your arm, to ensure more control and precision during the whisking process.
- Maintain gentle pressure, avoid pressing too hard, to create a fine froth without damaging the delicate tines of the whisk. Let the whisk lightly glide over the bottom of the bowl.
- Check for Foam: Assess the foam level and adjust whisking time accordingly. For a frothier latte, whisk a bit longer; for a smoother texture, whisk gently for a shorter duration.
- If the matcha isn't frothing, adjust the speed and pressure of your whisking.
- Avoid Harsh Whisking: Whisking too vigorously can create large bubbles and impact the latte's texture. Aim for a soft and continuous whisking motion.

whisk

STEP 5

sweeten

[OPTIONAL]

- Add sweetener to taste, if desired
- Some sweeteners that pair well with matcha are
 - Sugar
 - Vanilla Syrup
 - Honey
 - Condensed Milk

- 
- Pour the matcha into a cup with ice and milk (120 ml)

STEP 6

pour

Tips

- Pour the matcha gently and directly onto the ice to create a beautiful layered effect

PROPER STORAGE OF

matcha

- **Keep Matcha Fresh:** Store matcha powder in an airtight container, away from light, oxygen, and strong odors to retain its freshness.
- **Refrigerate if Possible:** Some recommend storing matcha in the refrigerator, but ensure it's well-sealed to prevent moisture and odors from affecting the flavor.
- **Avoid Storing Near Strong Odors:** Matcha can easily absorb odors, so avoid storing it near spices or other fragrant items.

ware care

- **Cleaning the Whisk:** Rinse the bamboo whisk (chasen) gently under cold running water. Avoid using soap as it can damage the delicate tines.
- **Dry Equipment Naturally:** Let the whisk, scoop, and other utensils air dry to maintain their integrity.
- **Store the Whisk on a Whisk Holder:** Using a whisk holder helps retain the whisk's shape and prolongs its life.

cold whisk method

- **Scoop then Sift**
 - Measure 4g of matcha powder using your chashaku
- **Add Milk**
 - Add 20g of milk to the bowl, then add your sweetener of choice
- **Knead**
 - Knead your matcha in a *circular* motion until it's thick
- **Add More Milk**
 - Add 20g more milk, and whisk in a *zigzag* motion until frothy
- **Prepare Milk**
 - Prepare 90g milk with your choice of sweetener. Pour and mix your cold-whisked matcha.
- **Chill**
 - Pour your matcha latte into the bottle. When ready to drink, pour the matcha over ice and enjoy!
